With over 50 public access points, parks, recreational and educational facilities along Biscayne Bay, this beautiful natural asset truly is Our Water, Our World and provides vast opportunities for interaction with the marine environment. As you will learn in this exhibit, insensitive development and the failure of our governmental bodies to implement protective policies based on science have lead to the Bay’s severe decline. We hope to educate our visitors, encourage responsible citizens to become advocates for Biscayne Bay, and insist our elected officials do their best to ensure health of Biscayne Bay for future generations.

Many thanks to the following contributors:

Biscayne National Park I Miami Waterkeepers I DERM
South Florida Water Management District
Army Corps of Engineers I Everglades National Park
National Parks Conservation Association I NOAA
University of Miami Rosensteil School of Marine and Atmospheric Science
